

Mini Ups Differentiation

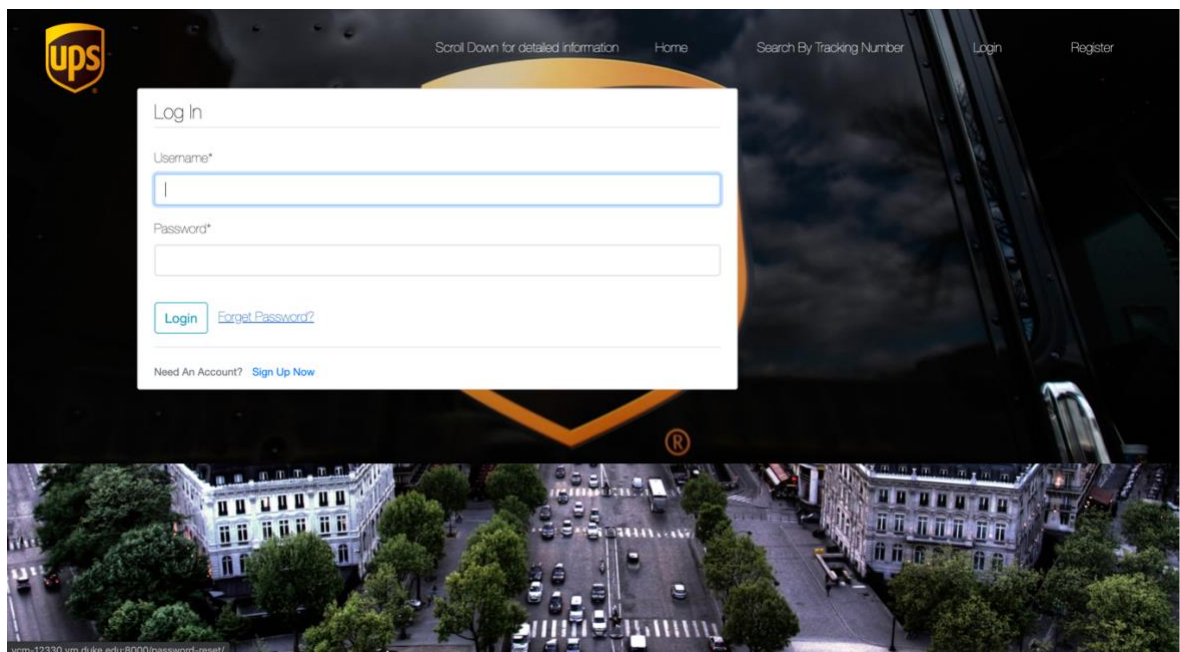

IG1 Group2 jm668 yz558

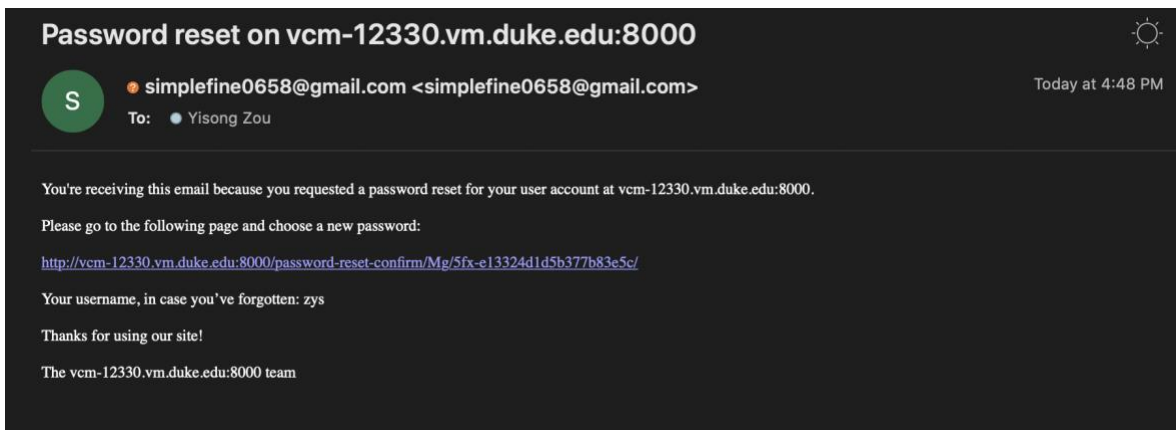

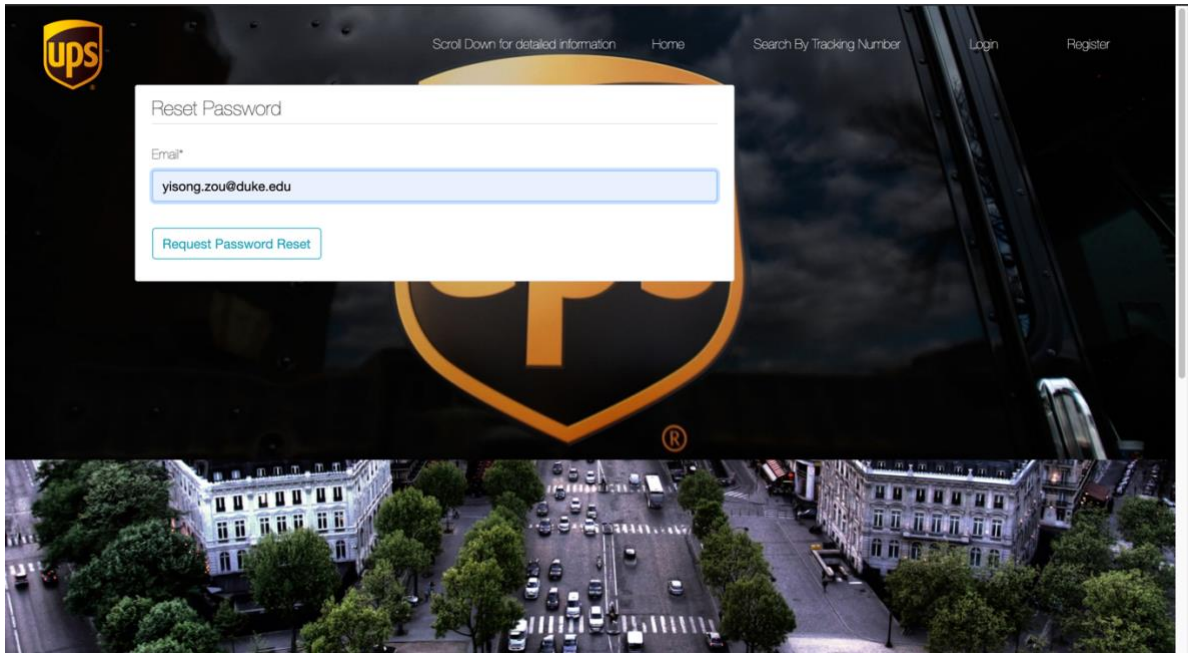

1. Function of adding a package without a upslid as user's own package:
Because for some packages, the user inside Mini Amazon might not provide a upslid, later when user logs into ups, he can use the tracking number to add this package to his own packages.(We forgot to capture a screenshot here, we can show this function during demo)
2. Function of changing user email:
User can change their email address inside profile part. This email will be used to reset the password if the user forgot it.

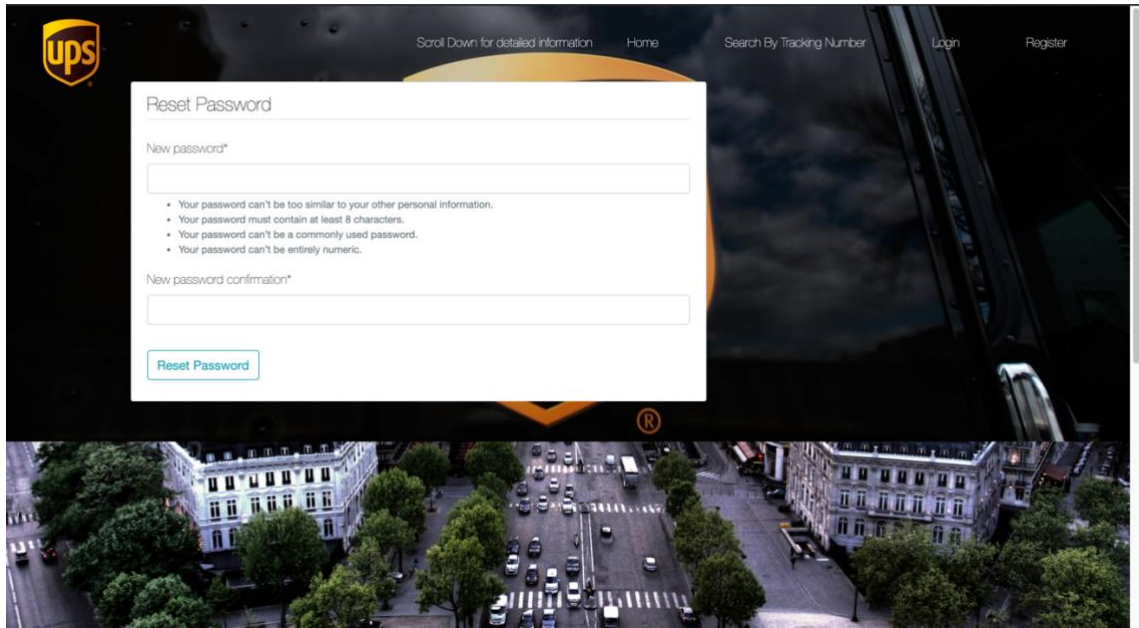

- Function of user password get back when the user forgets it using email:
If the user forgets his password, he can click the "Forget Password" link inside the login page. And he needs to input the email he used to register. And an email will be sent to the email address with link of resetting the password. When click the link, you will be redirect to a page to reset your password.

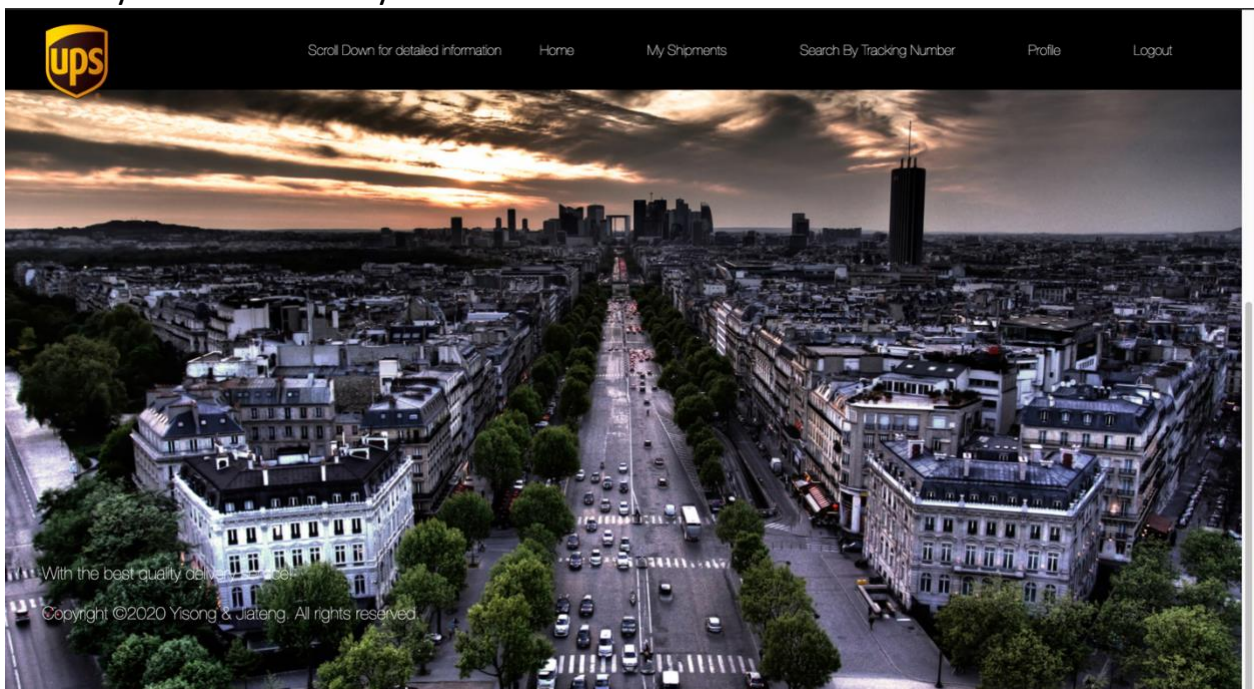

4. Impressive UI and easy to use user interface:

As a user, the website is quite beautiful and designed elegantly. User can easily manage their profile as well as search for the packages. The outputs are easy to read and easy to use.
